End-to-end pipeline test guide

Every pipeline of the platform, from an idea to a measured, completed project, tested with three accounts. Tick each step as it passes.

Name in this guide	Account	Plays the part of
ADMIN	nabiyumustafa@gmail.com	Runs the platform. Gives himself **Intake** (routes ideas to a review team), **Proposal approver** and **Delivery manager** (assigns developers).
OWNER	mustamiumustafa07@gmail.com	The person with the problem: writes every idea, gives the go-ahead, accepts the work (UAT) and records the results. Never reviews or builds.
HELPER	mustamiumustafa62@gmail.com	Owner of a test organization and team, platform reviewer (team lead), proposal writer, then the developer. Never writes an idea.

Why three people are enough. The platform refuses one person playing two parts on the same idea: an author cannot review their own idea, an idea cannot go to a review team that contains its author, whoever wrote a proposal cannot release it, and the developer cannot accept their own work. With the parts above, no step breaks those rules, and several steps below check that the refusals really happen.

Three separate browser sessions are required. ADMIN in normal Chrome, OWNER in a Chrome incognito window, HELPER in Firefox, Edge or a second Chrome profile. Two incognito windows of the same browser share one login.

Emails are printed, not sent. Invitation and activation links appear in the **backend terminal** (the one running `runserver`). Copy them from there.

If a step fails, write down the step number, who was signed in, and the exact message on screen. If the page says "We could not load...", copy the last error lines from the backend terminal too.

Start the app (two terminals)

```
cd backend && .venv/bin/python manage.py runserver
cd frontend && npm run dev
```

Part 0 · Preparation

Done once. Roles are given in the console; no commands are needed.

#	Who	Do this	You should see	✓
1	**ALL**	Log in: each person in their own browser session.	Each person sees their workspace.	☐
2	**ALL**	OWNER and HELPER: **Settings → Profile**. Give the two accounts different names, e.g. "Owner Test" and "Helper Test".	Both currently read "Mustamiu Mustafa", and the team-lead list shows names only.	☐
3	**ADMIN**	**/app/admin/roles** (Platform roles): add your own email as **Intake**, **Decisions & proposals** and **Delivery manager**. Add HELPER as **Developer**.	"Role given." under each card; the person appears in the list.	☐
4	**ADMIN**	Refresh the page (F5).	New powers take effect after a refresh.	☐
5	**ADMIN**	**/app/admin/reviewers**: Make reviewer with HELPER's email. Then Form a review team: name "Review Team 1", Lead = Helper Test.	HELPER listed as reviewer; the team shows "Helper Test (lead)", Active.	☐
6	**HELPER**	Refresh.	**Reviews** appears in the top bar. **No Admin button**: the console is the administrator's only.	☐

Part A · Individual idea, all the way to a completed project

The main pipeline: idea → platform review → proposal → go-ahead → assignment → build → test → UAT → deployment → impact → completed.

#	Who	Do this	You should see	✓
7	**OWNER**	**/app/ideas/new**: level **Individual**, fill in the guided form, attach a PDF, click **Submit for review**.	Status Submitted.	☐
8	**ADMIN**	**/app/admin/ideas** → on the idea's row click **Assign to review team** → the idea opens on the team picker → choose Review Team 1 → **Assign**.	The list's Review team column now says Review Team 1.	☐
9	**HELPER**	**Reviews** → Review queue tab → click the idea → **Start review**.	OWNER's idea reads Under review.	☐
10	**HELPER**	**Request changes**: "Please attach the current process document".	OWNER gets a notification; status Changes requested.	☐
11	**OWNER**	Open the idea: the **Respond to the review** panel shows what was asked. **Revise idea** → **Save changes**; **Go to documents** → attach a file; write what you changed → **Send response and resubmit**.	Submitted again (version 2); the changes-requested notification clears.	☐
12	**HELPER**	Open it in the queue: **the owner's response** is at the top. **Start review** (round 2): rate all five criteria → **Approved** → **Record decision**.	Recorded. OWNER is **not** told yet and still sees Under review.	☐
13	**HELPER**	Open the idea page → **Proposal** section.	"Approved - waiting for the platform admin". No **Start** button yet.	☐
14	**ADMIN**	**/app/admin/decisions**: read the team's feedback and the drafted congratulations letter, edit it if you like → **Send to owner and open the proposal**.	Sent. HELPER is notified: "You can now write the proposal".	☐
15	**OWNER**	Open the notification (and the email in the backend terminal).	A green **Congratulations** letter at the top of the idea; status Approved.	☐

#	Who	Do this	You should see	✓
16	**HELPER**	**Reviews** → My work → **Start the proposal**. Fill in only the executive summary and send it.	**Refused:** "Fill in the ... before sending it".	☐
17	**HELPER**	Fill in **every** section (summary, problem, feasibility, solution, requirements, scope, deliverables, timeline, milestones, financial requirements, **Owner pays = Yes**, payment plan, acceptance criteria). Send.	Sent to the admin.	☐
18	**OWNER**	Open the idea.	The proposal is **not visible** yet.	☐
19	**ADMIN**	**/app/admin/proposals**: check the board, then **Send back** with feedback.	Board shows the lead, sections and contributions; returned to HELPER.	☐
20	**HELPER**	Fix the timeline → send again.	Back with the admin.	☐
21	**ADMIN**	**Release**.	OWNER is notified.	☐
22	**OWNER**	Open the proposal (notification, or /app/ideas/<id>/proposal). Try to copy text, right-click and press Ctrl+P.	Your name, email and time as a watermark; copy, right-click and print blocked; no edit.	☐
23	**OWNER**	Under the proposal, **Your decision**: choose **Yes, go ahead**, answer the timeline question, pick a start date, add a note → **Give the go-ahead**.	Ready for implementation; your answers are shown; ADMIN notified.	☐
24	**ADMIN**	**/app/automation/queue** → open the opportunity: **What the owner asked for** shows the answers → assign it to **HELPER**.	Listed as ready, then assigned.	☐
25	**HELPER**	**/app/automation/projects**: **Create project** → **Start**. Tasks & milestones: add milestone "MVP", add task "Build" in it, mark it Done, complete the milestone.	Progress bar moves.	☐
26	**HELPER**	Testing: add test case "Import works" → **Start testing** → record **Fail** → **Submit for UAT**.	**Refused:** "1 required test case has failed".	☐
27	**HELPER**	Record **Pass** → **Submit for UAT**.	Project in UAT.	☐
28	**OWNER**	Project → UAT tab → add scenario "I can see my payments".	Scenario created.	☐
29	**HELPER**	Try to record that UAT result.	**Refused:** "Only the owner of the idea can accept or reject the work."	☐
30	**OWNER**	Record the scenario as **Passed**.	Accepted.	☐
31	**HELPER**	Deployment: environment `prod`, version 1.0 → In progress → Successful. Then try **Complete project**.	**Refused:** "Verify the deployment before completing the project."	☐
32	**HELPER**	**Verify** the deployment.	Verified.	☐
33	**OWNER**	Impact: before **240** min, after **30** min, estimated **20** h/week, measured **17.5** h/week.	**87.5%** time saved, **−2.5 h** variance; people reduced stays empty.	☐
34	**HELPER**	**Complete project**.	Status Completed.	☐
35	**ADMIN**	OWNER's idea page, the project's Activity tab, and **/app/admin/automation**.	Idea → proposal → project → deployment → impact all linked; every step logged.	☐

Part B · Organization idea, ending in rejection

The organization checks the idea before the platform sees it; the platform then rejects it.

#	Who	Do this	You should see	✓
36	**HELPER**	**/app/organizations**: create "Test Org", invite OWNER's email.	Invitation sent.	☐

#	Who	Do this	You should see	✓
37	**OWNER**	Copy the invitation link from the backend terminal into OWNER's window → Accept.	OWNER is a member of Test Org.	☐
38	**OWNER**	New idea at level **Organization** (Test Org) → **Submit for review**.	Goes to the organization, not the platform; not in OWNER's own review queue.	☐
39	**HELPER**	**/app/reviews** → request changes.	OWNER notified.	☐
40	**OWNER**	Idea page → **Respond to the review** → write what you changed → **Send response and resubmit**.	Back with the organization; the notification clears.	☐
41	**HELPER**	Verify it.	Organization confirmed.	☐
42	**OWNER**	**Submit to the platform**.	Submitted.	☐
43	**ADMIN**	Ideas → **Assign to review team** → Review Team 1.	Assigned.	☐
44	**HELPER**	Start review → rate all criteria → **Rejected** with a reason → Record decision.	Recorded. OWNER still sees Under review and hears nothing yet.	☐
45	**ADMIN**	**/app/admin/decisions**: read the drafted letter (it quotes the reason kindly) → **Send to owner**.	Sent.	☐
46	**OWNER**	Open the idea.	A warm "A letter about your idea" card; status Rejected; no actions left.	☐

Part C · Team idea, ending with the proposal declined

A team checks the idea; the platform approves it, but the admin declines the proposal.

#	Who	Do this	You should see	✓
47	**HELPER**	**/app/teams**: create a team, invite OWNER.	Invitation sent.	☐
48	**OWNER**	Accept with the link from the backend terminal.	OWNER is a team member.	☐
49	**OWNER**	New idea at level **Team** → submit.	Waiting for the team's check.	☐
50	**HELPER**	Verify it.	Verified.	☐
51	**OWNER**	**Submit to the platform**.	Submitted.	☐
52	**ADMIN**	Ideas → **Assign to review team** → Review Team 1.	Assigned.	☐
53	**HELPER**	Start review → **Approved** → Record decision.	Recorded.	☐
54	**ADMIN**	**Decisions** → **Send to owner**.	OWNER gets the congratulations letter.	☐
55	**HELPER**	Write the proposal with **Owner pays = No**, fill in the rest, send.	The payment plan section disappears.	☐
56	**ADMIN**	**/app/admin/proposals** → **Decline** with a reason.	OWNER notified; no Give the go-ahead button ever appears.	☐

Part D · Roles, messages and security

The refusals and the record-keeping around the pipelines.

#	Who	Do this	You should see	✓
57	**ADMIN**	**/app/admin/roles**: remove HELPER as Developer while Part A's project is still open. (Do this before step 34, or skip.)	**Refused:** "still delivering an opportunity".	☐
58	**ADMIN**	Remove yourself as Delivery manager while delivery work is open.	**Refused:** you are the last delivery manager.	☐

#	Who	Do this	You should see	✓
59	**OWNER**	Open **/app/admin**.	**Not authorized**.	☐
60	**ADMIN**	Try to route one of OWNER's submitted ideas to a team that includes OWNER (make OWNER a reviewer and add them to a second team first).	**Refused:** "A team member wrote this idea…"	☐
61	**ADMIN**	**/app/admin/users** → deactivate OWNER, then reactivate. Try deactivating yourself.	OWNER is signed out on the next click; deactivating yourself is refused.	☐
62	**ADMIN**	**/app/admin/categories**: create a category, then retire it.	It disappears from OWNER's new-idea form.	☐
63	**ALL**	OWNER and HELPER message each other at **/app/messages**; open **/app/notifications**.	Unread markers clear; every step above left a notification that opens the right page.	☐
64	**ADMIN**	Dashboard, Approvals, Reviews, Invitations, Notifications, and a user's audit history.	All reflect what you did, including each role given and removed.	☐
